SELECT*pi* X AMUSEMENT PRODUCTS LLC — INNOVATION BEGINS HERE

SELECT PI PURCHASING SYSTEM FOR BATTING CAGES

Originally, batting cages used quarters and then tokens. Eventually, swipe and tap cards replaced these as a better way to control the cash sales. Now, Amusement Products in collaboration with Select Pi are introducing a cloud-based purchasing system. There are two methods you can choose from for your new cage.

Our Select Pi system is less expensive and more efficient than the magnetic stripe or RFID tap card system.

OPTION A: NO HARDWARE QR LINK SYSTEM

This system requires little up-front payments or hardware. With the QR link system, the customers' smart phone becomes the interface. There is a custom QR Code posted on each kiosk (see graphic on left) that identifies the location and cage number. When scanned using their smart phone, it automatically opens the Select Pi portal where they can purchase hitting cycles. They can choose one cycle (typically 15 pitches), several cycles, or time play in 15 and 30 minute increments.

The customer pays on the app using a credit card, Pay Pal, Apple pay or other online payment system. Once paid, the machine is turned on to begin the cycle. For the Ultimate Trainer 3020, it opens the selection menu for the customer to choose one of 48 different speeds, types of pitches and where they want it in the strike zone. Once all is selected, they press START to begin their session.

OPTION B: QR + CARD READER SYSTEM

System components:
- **LED Display which is a touch screen interface**
- **Credit card reader and Tap to Pay**
- **QR code scanner**

CREDIT CARDS: These tools allow your customers to purchase individual batting cycles or time play. Your customers can choose what they want to purchase on the touch screen and using a credit card.

MOBILE APP: Using the Select Pi app, the customer can use their digital wallet, credit card, or payment system like Apple Pay to purchase what they want. Once purchased, the system provides a QR code that can be read by the QR reader to activate the machine for the choices they purchased.

ADD-ON POINT OF SALE SYSTEM

POS Hardware

This is for a Point of Sale at a counter so you can sell cycles or time for the batting cages inside your building.

- QR Code scanner
- Credit card pad (swipe and tap)
- Surface tablet
- PC to run the software
- Receipt printer to print QR codes for cage usage and receipts
- Cash Box (not pictured)

POS Software

- Fully integrated functionality
- Avoids manual entry of totals
- One processing account for the batting cage, point of sale and at the customers mobile app
- Includes Inventory module and advanced reporting
- Manage gift cards and game cards
- Control game stations by time
- Ability to setup recurring billing
- Full retail functionality
